EZFlow® Syringe Filters

Foxx Life Sciences provides a wide range of Syringe Filters in different materials: cellulose acetate (CA), hydrophilic polytetrafluoroethylene (PTFE), hydrophobic PTFE, glass fiber, nylon, polyethersulfone (PES), polypropylene, and polyvinylidene fluoride (PVDF). These variants solve all application needs from pre-filtration and clarification, to particle removal of particle-laden, organic, and many other different solutions. Additionally, each syringe filter is made with USP Class VI components to guarantee the quality of your results.

EZFlow® 13mm, 25mm, and 33mm sample prep syringe filters are designed for aqueous and organic solution samples. The sample prep syringe filters are used for clarification and particle removal from samples before instrumental analysis such as HPLC, IC, and GC. Offered in 0.2µm or 0.45µm pore sizes. The filter membranes are reinforced with polypropylene housing with a female Luer-lok inlet and a male Luer slip outlet.
