AUTOMATED URINE ANALYZER
COMPACT

AUTION ELEVEN™ AE-4020

High Productivity, Proven Technology

AUTION ELEVEN is the eleventh model of AUTION series which is ideal for use in small-to-medium-sized hospitals and clinics with its smart design and features. Space-saving design that is smaller than B4 paper size. High speed performance of 7 seconds per sample. Optimal device for urinalysis at small and medium-sized hospitals/clinics.

Aution Eleven AE-4020 Automated Urine Analyzer

ARK-14403

~~\$9,532.13~~ **\$7,582.00** **20% OFF**

Further Improved Measurement Accuracy

Unlike our conventional products where excess urine was absorbed by an absorbent pad, AUTION Eleven is equipped with a new mechanism that uses capillary action to absorb and remove excess urine. By increasing the excess urine absorption power, the measurement accuracy was further improved.

Further Pursuing Compactness

Compared to the conventional products, this device is even smaller and lighter. It can be installed in a very small space. In addition, it has a power-saving design that reduces the operating costs.

It Takes 7 Seconds To Process One Sample.

High-speed processing with 7-second sequence 514 samples can be processed in an hour. This device performs at the highest level in its class.

High Precision Measurement Of Spot Urine Is Possible

12 qualitative urine items + color tones are measurable. Additionally, measuring creatinine with protein/microalbumin at the same time makes high precision measurement of spot urine possible.

Full Of Easy-To-Use Functions

It has an "auto-start mechanism" that automatically starts measurement by just setting a test strip onto the tray. It also has a "left/right placement function" that makes it possible to place a test strip from either the left or right side. You don't even have to press the start key. We strove for a user-friendly device for both right-handed and left-handed users. Also, as it is a low maintenance device, high precision measurements in a clean environment are always possible.

Aution Sticks 10EA, 100/Bottle

ARK-73591

~~\$64.96~~ **\$51.70** **20% OFF**

UOM: 100/EA

ARKRAY's AUTION Sticks 10EA represent an enormous investment of company time and resources in producing the most advanced urine test strip for the medical profession. AUTION Sticks help ensure accurate measurements both visually and automatically. Covers all items necessary for urine testing. A maximum of 10 items can be measured simultaneously. Choice of visual measurement or automatic measurement on an exclusive analyzer.

Fully Automated Urine Analyzer

AUTION MAX AX-4060

High Performance Full Automated System

Color Touch Panel for good usability 7 inch WVGA color touchscreen with high operability displays measurement results, instrument conditions and operating instructions.

Aution Max

AUTION MAX derives its name from being achieving the maximum in performance, the leader in fully-automatic urine analyzers and ARKRAY conducted development with a view that the analyzer to succeed this one must also be a Max. The AUTION MAX was constructed with the aim of being the best (the Max) and it currently is a top product.

The AUTION MAX Test Strip Feeder - Perfection in Techniques

An urine test strip consists of reagent filter pads attached a layer of film and is long, delicate and fragile. The fragile strips must be accurately supplied into the analyzer one by one from the test strip feeder. The test strip feeder is known as one of, if not the, key characteristic unit of the AUTION MAX.

Sample Delivery System Enables Micro Volume Samples To Be Measured

As the sample is drawn through the nozzle and delivered correctly and quantitatively to each pad of the strip, the micro volume samples (minimum 1mL) can be measured easily. No cross contaminations are found on the reagent portions despite high sample volume.

Nozzle Cleaning And Sample Dilution Enabling Correct Measurement Result All The Time

The AUTION MAX works by aspirating a urine sample with the nozzle and applying it to a test strip.

Automatic Glycohemoglobin
Analyzer

ADAMS A1c HA-8190V

New Standard for HbA1c Testing

The ADAMS A1c, HA-8190V is a fully automated Glycohemoglobin (HbA1c) analyzer based on HPLC (High Performance Liquid Chromatography). HA-8190V detects and separates variant hemoglobin automatically, and this function will be the new standard for hemoglobin analyzer.

ADAMS A1c HA-8190V (INT-IVD) Set

High Speed Measurement

Only 24 sec/test in Fast mode and 58 sec/test in Variant Mode.

Two modes with shorter TAT

Variant Mode is capable of detecting HbE and HbD by separating variant hemoglobins HbS and HbC. Measurement speed in Variant Mode becomes now fast enough for routine testing. First screening of a patient is recommended in Variant Mode. Follow-up visits can now be performed more efficiently. Need to operate with LIS.

User Friendly

Sample tubes rotate automatically for barcode reading, eliminating work flow to align the tubes. By using different racks for different purposes, samples can be identified correctly without any special operation. Improved operability with touch screen.

Better HbA1c Results

Detect and separate variant hemoglobin automatically as standard function.
